

Social Engineering and Cybersecurity Class

Today, just like learning to swim, everyone needs basic defenses against social engineering. In this class, we'll break down how these attacks work, the common tactics to watch for, the payment red flags they use, and practical ways to prevent them. We'll cover the major attack types, install and demonstrate essential security tools step by step, and show you exactly what to do when something looks suspicious.

What we'll cover in the full class (you can always ask questions if you don't understand what's in the pdf)

The screenshot shows a file explorer window with a title bar that includes a checkmark, a hamburger menu, a grid icon, and an information icon. Below the title bar, there are four filter buttons: 'Type', 'People', 'Modified', and 'Source'. The main content area displays a list of files. The first file is 'Video call App, voice cloning and safety.odt' and the second is 'Deep Fake detector for protection.odt'. Both files are Word documents, indicated by the 'W' icon, and were last modified on 'Sep 15, 2025'. Each file has a three-dot menu icon to its right.
